ABSTRACTED-PUB-NO: JP 02253156A

BASIC-ABSTRACT: In dispensing chromatography, a three-dimensional chromatogram is obtd. by a monitor for a multi wavelength absorption spectrum of liq. dissolved out from a sepn. column. Based on the three-dimensional chromatogram, from a chromatogram of a specified wavelength, a peak of a target component is detected. The rise and the fall of the peak and the spectral pattern of the multi wavelength absorption spectrum of a vertex are compared. When the deg. of coincidence between them exceeds a given value, the deg. of peak refinement is decided, and eluate equivalent to the peak is sampled.

USE/NEADVANTAGE - Can dispense by deciding the deg. of peak refinement of chromatogram of eluate.
